OFERTA DEL departamento de Finanzas (FAP) DEL CERN para contratar hasta seis Project Associates con este perfil:

Full stack Java/HTML5/JavaScript/SQL software engineer

The Administrative Information Systems (FAP-AIS) group is responsible for providing CERN with business computing services and hence is the backbone for enabling CERN's administration to create the conditions for physicists from all over the world to successfully conduct particle physics related research. The group provides in-house developed software and runs complex commercial solutions. The group's services cover all aspects from hiring of personnel, managing contracts, running ERP systems (covering HR, personnel, planning and logistics), managing interventions (incl. the management of access to the underground/accelerator areas), providing tools for CERN's outreach activities as well as managing documents and supporting more than 70 business processes in an entirely automated paperless way.

Selected candidates will contribute as full stack (web) developers in an agile environment (Scrum, Kanban) to the maintenance, support, enhancement and new development of different applications supporting CERN key business processes. The principal technologies that will be used are Java, JavaScript, HTML5 and CSS. In addition, the selected candidates will work with Oracle databases, use SQL and may also work with BI/ETL tools (e.g.Pentaho) or ERP systems. Candidates will be fully integrated into sections of around 10 developers and participate in the sections? support and maintenance activities.

Having a good knowledge of the group's core technologies (e.g. Java 8, Spring Boot, SQL, JavaScript) would be an advantage.

Candidates are expected to possess a good working knowledge of either English or French.
