

Software Developer Analyst

We are looking for a dynamic person to join our technology team that can actively contribute to the development of a clinical trial management system and to the full corporate digitalization within the biotechnological and pharmaceutical sector.

The technological ecosystem is based on:

- K2 version 5 Business Process Management System, code less 3rd party solution
- Microsoft Azure virtual machines in an IAAS architecture
- SQL Server 2017 as a business database
- Some C# code to integrate K2 with Microsoft Graph to manage Office 365 SharePoint
- SharePoint Online, sites and document libraries

The person who joins the team should have knowledge of database design and programming, and good programming skills.

Background:

- Telecommunication or Computer Science Engineer Graduate or similar

Required technologies:

- Transact SQL
- Microsoft SQL Server
- Business Process Management systems experience is a plus
- SharePoint/Office365 experience is a plus
