Full Stack developer

- **Company description**
  - Robin Rover is a platform that allows its users to anonymously market the data they generate in their online purchases. This data allows third parties to better understand the purchase patterns to avoid generalist segmentations and really focusing on what users buy in real time.

    In exchange for giving your information they receive tokens (depending on the number of orders you send) with which they can earn money. At the same time, part of the money collected will go to social projects chosen by users. In Robin Rover we believe that if it's your data, it's your rules.

- **Job Overview -** Key Responsibilities and Deliverables:
  - Oversee all technical operation of Robin Rover
  - Build and manage the technology development team
  - Designing and defining technical roadmap and technical architecture providing the right solution (APIs, SDKS, portal, etc.)
  - Liaising with vendors to evaluate product fit, identifying strengths, weaknesses, understanding gaps and risks
  - Advising on cybersecurity to identify and manage solutions

- **Requirements -**
  - Background
    - Telecommunication or Computer Science Engineer Graduate or similar
  - Desired Skills & Abilities
    - Data Base: MySQL / MariaDB. Some knowledge in MongoDB is a plus
    - Backend: Java EE, WildFly application server
    - FrontEnd: HTML / CSS / Javascript. Some knowledge in Angular2 is a plus
    - App: Apache Cordova / Ionic
    - Knowledge in Git / GitLab.
